Lumen x Meter

Reliable connectivity, delivered

Today's enterprise landscape is defined by transformation. Organizations are reimagining how they connect, protect, and scale their operations to meet the demands of a digital-first world. According to Gartner, 80% of enterprises will have adopted a strategy to unify cloud, edge, and network infrastructure by 2026, seeking greater agility and security in their operations[1].

As businesses invest in next-generation connectivity, automation, and security, the ability to deliver reliable, scalable infrastructure is more than a technical advantage-it's a catalyst for growth. IDC reports that the global spending on digital infrastructure is projected to reach $1.5 trillion in 2025, with organizations prioritizing investments in AI-powered networks and integrated management platforms[2]. The rise of Network as a Service (NaaS) and Secure Access Service Edge (SASE) is simplifying complexity and enabling enterprises to thrive in an environment where technology is at the heart of every experience.

Lumen and Meter are partnering to help customers navigate this journey. Together, we're on a mission to deliver the most reliable connectivity and delivery services on the market so you can focus on business needs that matter most. By combining Lumen's advanced network services with Meter's innovative and integrated network platform, we empower organizations to create network experiences that go live fast, connect locations effortlessly, and simplify operations for IT teams. Our solution provides true consolidation for customers by offering a single point of contact for support, unified billing for services, and transparent density-based pricing tailored to your business needs. This approach helps eliminate complexity, streamlines operations, and make managing connectivity simple and efficient.

Challenges redefining network connectivity

- **Vendor and Network Complexity:** Multiple providers create fragmented operations and management headaches

- **Inconsistent Latency and Performance:** Unpredictable latency impacts app performance across distributed sites

- **Heavy Operational Burden:** Manual rollouts and troubleshooting slow expansion and innovation.

- **Inconsistent Operations and Security:** Uniform standards across locations are difficult to maintain

- **Unpredictable CapEx Cycles:** Fluctuating expenses make planning and scaling difficult

- **Talent Shortages:** Scarcity of skilled IT professionals limits technology adoption and management

LUMEN TECHNOLOGIES **meter**

Lumen x Meter deliver connectivity without complexity

Integrated Connectivity
Lumen and Meter deliver single, unified connectivity with built-in telemetry, redundancy, and consolidated support. Quickly deploy secure, scalable networks across multiple sites, ready for AI-driven applications and automation.

Deploy Fast
Deploy secure wired, Wi-Fi, and cellular networks in days, not months, with automated provisioning and proactive management. Expand to new locations quickly using Lumen's low latency backbone, all managed from a single dashboard with predictable subscription options.

Simplify Operations
Simplify operations with a fully managed solution that delivers seamless edge-to-core performance and consistent experience across locations. Flexible subscription options replace unpredictable capital expenses, giving you clear, predictable costs and the ability to scale services as your business needs change. Free your IT teams to focus on strategic priorities, not networking troubleshooting.

Lumen x Meter integrated solution

Distributed Enterprise Connectivity
Resilient connectivity for each site, reliable Wi-Fi/cellular, and backbone for critical operations with all-in-one security with zero trust architecture.

Consistent/Multi Site Expansion
Frictionless branch expansion with fast LAN/Wi-Fi deployment and backbone connectivity. Meter manages entire setup with experts across the country for ongoing support.

### Network-as-a-Service Transformation
Fully managed networking with subscription-based LAN/Wi-Fi and backbone, enabling financial predictability.

Smart Campus & Edge Experiences
Seamless support for IoT and real-time apps with managed cellular and low-latency backbone. Enable stress-free teaching and learning with one partner that designs, configures, and manages high-capacity LAN and SD-WAN networks with hardware built in house.

Hybrid Cloud & SaaS Interconnection
End-to-end connectivity from branch to cloud with low latency and unified visibility. Lumen x Meter simplify management and help accelerate cloud adoption with a single, integrated solution.

Lumen is Meter's preferred provider for integrated network connectivity

Why Lumen x Meter?

Lumen and Meter are on a mission to deliver the **most reliable connectivity** and **delivery services** on the market. Together, we make enterprise networking **easy to purchase**, **simple to deploy**, and **seamless in driving measurable value**. The result is a network experience designed to **launch fast, connect each location** effortlessly, and **simplify operations** for IT teams.
