

Cloud Consulting Services

Lumen Cloud Consulting Services is a convergence of **The Right Cloud**, **The Right Expert** and **The Right Services** for Enterprise customers that are seeking specialist assistance with assessing their current on-premise or public cloud environments, as well as furthering their digital transformation initiatives.

The Right Cloud

Running Enterprise workloads on a public or hybrid cloud enables businesses to quickly respond to changing business demands. Moreover, leveraging the optimal deployment of public hyperscale and private cloud helps ensure applications can be agile and flexible, while still meeting the high availability, disaster tolerance, performance and regulatory mandates of enterprise workloads.

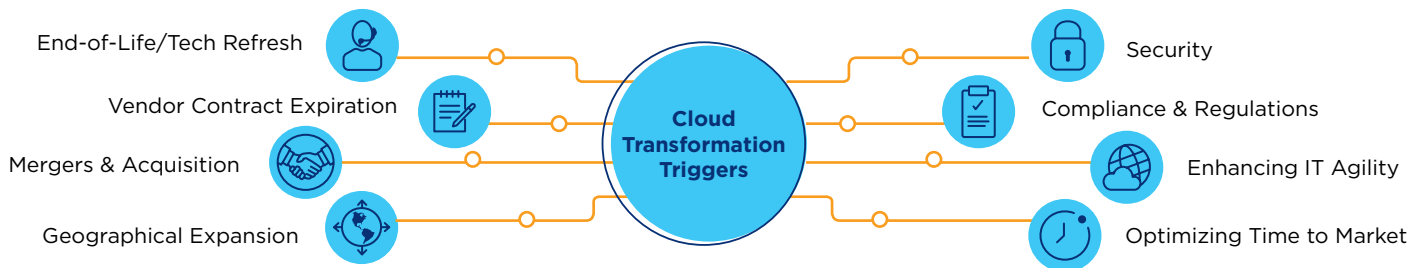

The Right Expert

Engaging Lumen for your Cloud Adoption Journey helps ensure you are partnering with the one strategic partner you'll need to meet your desired IT and business outcomes. Lumen's IT professionals team has more than 1,900 certifications across our technology ecosystem to ensure we can provide tailored experiences to our customers. Furthermore, Lumen has a decade of experience assisting enterprise customers - including Fortune 500 and Global 500 companies, determine the best execution venue for their business workloads.

The Right Services

The modernization of traditional IT Departments into profit centers that drive innovation and digital initiatives requires the successful adoption and implementation of end-to-end transformation strategies. Lumen offers Cloud Consulting Services to assist customers achieving their business objectives at various stages of their Cloud Adoption Journey.

Cloud Assessment Services assess current infrastructure and applications using market-leading technologies and industry best practices, to provide analysis and recommendations on accelerating your transformation towards a digital Enterprise.

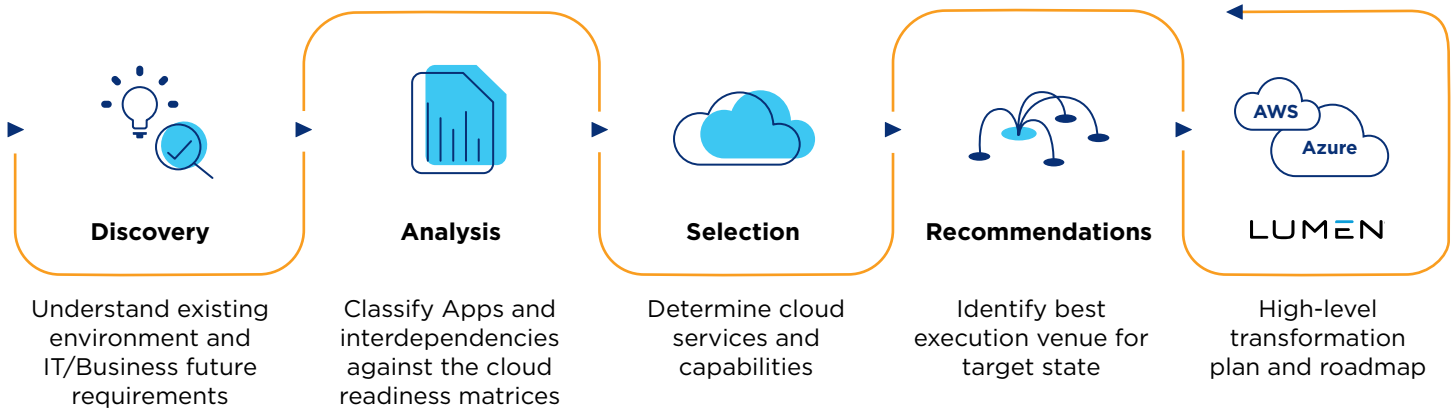

Cloud Design and Transition Services help customers migrate and transform workloads and environments onto a public or hybrid cloud, with objectives of zero app data loss and near-zero downtime.

Cloud Optimization Services assists existing AWS/Azure customers to take full advantage of the hyperscale platforms and features to achieve optimal business performance and IT agility.

Lumen Cloud Assessment Services collect and collate technical and business inputs from customer sources and automated discovery tools to evaluate and categorize the cloud readiness of infrastructure and applications.

Lumen will identify a best execution venue strategy, along with recommendations to upgrade your legacy IT into a business-driven environment.

The migration of an existing IT environment onto a public or hybrid cloud platform without the worry of breaking or disrupting vital business systems can be challenging. Leveraging **Lumen Link Cloud Design and Transitions Services** can assist Enterprise IT Departments to quickly and successfully adopt the full benefits of cloud technologies without the need of in-house expertise.
