Lumen SASE with Fortinet

- Fully managed, fully integrated network and security converged experience.

- Next-Gen Security
- Secure access for Hybrid Workforce
- Secure networking for a hyperconnected world
- SD-WAN Zero-trust network architecture

- Flexible management levels and services to optimize secure network outcomes.
- Centralized visibility and control with policy-driven security with adaptability.
- Comprehensive digital experience and centralized management for all interactions.

Fortinet and Lumen are better together.

Fortinet is recognized as a LEADER in Gartner’s 2021 Magic Quadrant™ Reports

- Network Firewalls
  - US Patents
  - Source: U.S. Patent Office. As of March 31, 2022

- Exceptional speed, throughput, and efficiency

- Next-generation firewall as a service

- Threat intelligence
- Automated threat detection. Built-in protection. The platform with integrated security from the core to the edge

Lumen provides a deep level of network availability, control, and visibility to help IT leaders with application performance and security from the cloud, down to the end user and their devices.

- Built on one of the largest, global fiber backbones with 180,000+ on-net buildings, and more than 50 edge nodes, Lumen has the capacity and presence that delivers high-availability of low latency performance and supporting security leaders better support the applications on their networks.

- Operating one of the most highly peered IP backbones in the world, Lumen offers high-speed edge points of presence in major markets across the globe. This provides connectivity options to cloud-based services, and business can quickly scale by scaling employees to handle virtual workloads without having to move physical points of presence.

- Lumen connects over 2,200 public and private data centers with our network, and serves your business depending on where you need to access from virtually anywhere.

- Secure networking for a hyperconnected world. Driving convergence to enable secure dynamic network edge.

- Lumen SASE with Fortinet

- Fully managed, fully integrated network and security converged experience.

- Next-Gen Security
- Secure access for Hybrid Workforce
- Secure networking for a hyperconnected world
- SD-WAN Zero-trust network architecture

- Flexible management levels and services to optimize secure network outcomes.
- Centralized visibility and control with policy-driven security with adaptability.
- Comprehensive digital experience and centralized management for all interactions.

Netw ork Evolution
- Physical, slow-to-change networks are giving way to change responsive for the digital revolution

- The perimeter is now your branches, metroes, end-points — increasing security risks

Network Modernization
- Centralized visibility and control with policy-driven management, network agility, and security + network convergence

- SD-WAN for SASE
- Zero-trust network access (ZTNA)
- Threat intelligence and response

- Fortinet SASE Fabric Security
- Fortinet Security Fabric
- Threat intelligence

- Lumen Platform
- Service-based, fully managed agile platform with unparalleled secure SD-WAN
- Flexible management levels and services to optimize secure network outcomes.
- Centralized visibility and control with policy-driven security with adaptability.
- Comprehensive digital experience and centralized management for all interactions.

Remote Users
- Users receive seamless, secure experiences as they move through the hybrid workplace

Expanding Attack Surface
- The perimeter is now your branches, metros, endpoints and cloud — increasing security risks

Transition to Cloud
- The onramp to the cloud and acceleration of SaaS is straining the current networks and creating multiple bottlenecks

Transition to Cloud
- The onramp to the cloud and acceleration of SaaS is straining the current networks and creating multiple bottlenecks

Transitional Consultancy
- Physical, slow-to-change networks are giving way to change responsive for the digital revolution

The digital revolution is here...
Do you have secure, high performing connectivity in place?

- Remote Users
- Users receive seamless, secure experiences as they move through the hybrid workplace
