FÖRTINET **LUMEN** TECHNOLOGIES

Secure access for the distributed business

The digital revolution is here…
Do you have secure, high performing connectivity in place?

Remote Users
Users need a seamless, secure experience as they move through the hybrid workplace

Transition to Cloud
The onramp to the cloud and acceleration of SaaS is straining networks and creating multiple WAN and LAN interfaces

Expanding Attack Surface
The perimeter is now your branches, edges, endpoints, and cloud — increasing security risks

Network Evolution
Physical, slow-to-change networks can't keep pace with change required for the digital revolution

Security with adaptability.
Fully converged. Flexibly managed.

Network **Security**
Lumen SASE with Fortinet

Service-based, fully managed agile platform with uniquely secure SD-WAN.

Flexible management levels and services to optimize secure network outcomes.

Comprehensive digital experience and centralized management for all interactions.

Where Fortinet and Lumen help businesses.

Secure Access for Hybrid Workforce
Ongoing protection, secure access, and seamless experience for users near and far

Next-Gen Security
Next-gen cyber protection against ransomware, malware, and other threats known and unknown

Transition to Cloud
Safe journey to the cloud and fast, secure connectivity to apps and data

Network Modernization
Centralized visibility and control with policy- driven management, resilience and agility, and security + network convergence

The best of both worlds:
network + security
choice + flexibility
leading services + innovation
with everything you need baked in.

Lumen SASE with Fortinet
Fully managed, fully integrated network and security converged experience.

Next generation firewall as a service

Secure SD-WAN

Zero-trust network access (ZTNA)

Threat intelligence and response

Fortinet Security Fabric
Unified management for agnostic ecosystems and mixed environments

Fortinet Security Processing Units
Exceptional speed, throughput, and efficiency

Lumen Platform
Global IP with local gateways + automation for high performance from edge to cloud

Fortinet and Lumen are better together.

FÖRTINET

Secure networking for a hyperconnected world. Driving convergence to enable security at any network edge.

Gartner
Fortinet is recognized as a LEADER in 2 Gartner® 2021 Magic Quadrant™ Reports
🏴 Network Firewalls
↙ WAN Edge infrastructure

≋IDC
Fortinet is positioned as a leader in the 2021 IDC Marketscape for Worldwide SD-WAN Infrastructure

FORRESTER
Fortinet is positioned as a Strong Performer in The Forrester Wave™: Industrial Control Systems (ICS) Security Solutions, Q4 2021

FROST & SULLIVAN
Fortinet is one of the top vendors recognized in Frost & Sullivan's Frost Radar™ for email security, NAC, SWG, and SD-WAN

Technological Leadership
Nearly 3X more patents than comparable network security companies

US Patents
Fortinet **914**
Palo Alto Networks 335
FireEye 307
SonicWall 217
Check Point 93

LUMEN TECHNOLOGIES

Automated threat detection. Built-in protection. The platform with integrated security from the core to the edge.

Lumen provides a deep level of network availability, control, and visibility to help IT and security leaders better support application performance and security from the cloud, down to the end user and their devices.

Built on one of the largest, global fiber backbones with 180,000+ on-net buildings, and more than 50 edge nodes, Lumen has the capacity and presence that delivers high-availability of low latency performance support for real-time applications.

Operating one of the most highly peered IP backbones in the world, Lumen offers high density edge points of presence in major metros across the globe. This provides many onramps to cloud-based services, web, and SaaS applications employees need to access from virtually anywhere.
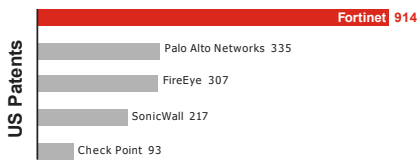

Lumen connects over 2,200 public and private data centers with our network, offering optimal access to the applications and services your business depends on.
