Lumen Enterprise Cloud Services for AWS

Lumen Enterprise Coud Services for AWS is a convergence of **the right cloud**, **the right expert** and **the right services** to successfully enable your Enterprise workloads on Amazon Web Services (AWS) or a hybrid cloud architecture powered by a Lumen private cloud.

The right cloud

Running Enterprise workloads on a public or hybrid cloud enables businesses to quickly respond to changing business demands. The global footprint and resilient platforms of AWS and Lumen help ensure applications can be agile and flexible, while still meeting the high availability, disaster tolerance, exceptional performance and regulatory mandates of Enterprise workloads.

The right expert

Engaging Lumen for your Enterprise workload deployments on AWS helps ensure you are partnering with the one strategic partner you'll need to meet your desired IT and business outcomes.

Lumen is an AWS Managed Service Provider, Advanced Consulting Partner and Direct Connect Partner, as well as a VMware Cloud Verified Partner. Lumen has a decade of experience providing Cloud Hosting and Managed Services to Enterprise customers, including to Fortune 500 and Global 500 companies.

The right services

Lumen helps customers determine the best execution venue for their business workloads. Lumen Enterprise Cloud Services improve the efficiency of technology, people and processes to reduce their operating infrastructure and application costs.

Lumen suite of Enterprise Cloud Services for AWS comprises of:

- **Lumen Private Cloud** – Managed VMware private cloud solution deployed within a Lumen global data center

- **Cloud Application Manager** – A single console for optimized cloud management of Enterprise applications and workloads across public cloud or hybrid cloud environments

- **Cloud Managed Service** – One-stop-shop of monitoring, patching and remote administration via automation by certified IT professionals

- **Advanced Managed Services** – Experienced AWS certified professionals to architect and elevate operational governance for AWS and Hybrid IT environments

- **Cloud Consulting Services** – AWS certified experts that can deliver end-to-end consultative engagements for Assessments, Designs, Transitions and Implementations

- **Cloud Native Application Development Services –** A fullstack App Development consulting service allows businesses to embark on digital transformation to AWS. This includes end-to-end consultative design and development of cloud native apps using microservices and AWS serverless services of lambda, API Gateway, etc.

- **Managed Security Services** – A comprehensive portfolio of Network/ Premises/Analytics and Threat Management/ Consulting Security Services to help safeguard your digital business

- **Cloud Connect** – Secure, high performance private connectivity and managed services to connect your on-premise network directly to your AWS environment
