Development - Lumen

Virtual Reality Simulator

Education

Join like-minded technology leaders to co-ideate around how Edge Computing solutions can empower workloads to adapt to any environment. Learn how enabling trusted connections where you need them can offer your business the next wave of innovation fuel.

We'll discuss use cases that drive desired business outcomes:

Move fast – bring applications from the cloud core to the edge to help reduce application latency and increase workforce productivity

Scale quickly – securely store and process data closer to where data is created or where data is available to enable new experiences and app development

Embrace flexibility – minimize and simplify support costs through consolidating on-premises applications to metro locations

Engagement

Whether you need to move fast, embrace flexibility or scale quickly, your business has the need for speed, and accurate and secure data. Milliseconds matter and are as important in business as they are in sports.

Meet Andy Papathanassiou, First NASCAR "Pit Crew Coach," Team Building and Innovation Expert. He will discuss how adaptability is key to innovation and how achieving success is a process and not an "aha" moment.

Entertainment experience

Test your driving skills in a race car-inspired virtual reality simulator using the latest and greatest technology and cutting-edge VR equipment to give you the most realistic and immersive experience possible.

So, whether you're a seasoned racer or just a casual fan... you'll have a blast, and the experience will keep you on the edge of your seat!
