Lumen® Ransomware Assessment

Stop ransomware before it strikes.

Lumen Ransomware Assessment helps companies minimize their risk exposure to ransomware. Our program combines ongoing scanning and assessments with a designated consultant who will review and recommend how to structure your security controls and procedures to facilitate a faster recovery time.

Minimize the likelihood of ransomware infection

Identify weaknesses and receive recommendations for ways to reduce the attack surface.

Reduce the impact of ransomware

See what is impacted and get recommended controls to help minimize business disruption.

Improve resiliency

Get strategies for how to reduce ransomware exposure, strengthen security practices and controls, and increase incident response and preparedness—enabling a more secure environment.

LUMEN®
TECHNOLOGIES
Features and Specs

Vulnerability assessment

- Experts perform black, white or gray box scanning
- Quarterly re-scans of internal and external IPs to monitor progress over time
- Designated consultant to advise you on technical measures to help reduce risk

Evaluation of security controls

- Evaluation of backup strategy, review backup policy, procedures and processes
- Review of network architecture and segmentation strategy
- Review of data classification policies, data flows and understand how you collect, process, store, manage and dispose of your data
- Evaluation of current protection against malware
- Review of business continuity program and incident response plans

Visibility and reporting

- Lumen security consultant will provide regular reporting on open vulnerabilities and your progress towards remediation
- Comprehensive gap analysis and tailored roadmap to reduce risk of ransomware

Ongoing remediation management

- Designated consultant to advise you on technical measures to help reduce risk
- Evaluate and refine risk management program
- Awareness and training recommendations for personnel and staff
- Incident response tabletop exercise and recommendations on how to improve

Defense assessment

Evaluate your security team's ability to prevent and respond to attacks with ongoing vulnerability scanning

Visibility

Identify systems more likely to be initially attacked and receive a roadmap for building a more secure environment

Prescriptive results

Provide detailed findings with risk treatment recommendations through ongoing reporting

Expertise

Offer expertise and security intelligence to help you combat ransomware and other harmful threats

Why Lumen?

Build an effective managed security program to minimize risk exposure and ease business drag with Lumen Ransomware Assessment. Our expert security consultants combine both vast security experience and industry standard tools to help reduce your risk of malware exposure and ease strain on resources.
