SASE Solutions

Unified network and security application management for the modern workforce

Our latest tech trends report, *How Next-Generation Technologies Are Powering Digital Transformation*, explores the emerging need for a fresh approach to network architecture driven by increasingly distributed enterprises with multiple locations and remote workforces. Enter Secure Access Service Edge (SASE), a single service unifying networking and security to deliver efficient application performance and secure access from virtually anywhere, on any device.

Today's high-performance SASE solutions help boost productivity, enable a flexible workforce and deliver on the challenges of a modern distributed enterprise.

Comprised of five core networking and security technologies delivered as a service, the SASE framework is ultimately better suited to meet the challenges of modern enterprises than a patchwork solution.

85%
of Global ITDMs agree that implementation of SASE is critical to their organization's long-term growth.[1]

About
3 in 4
Global ITDMs see robust collaboration solutions as vital to their productivity and business operations.[1]

9 in 10
Global ITDMs cited application and data security as their number one IT concern.[1]

Lumen® SASE Solutions

- 6,300+ unique AS interconnects globally[2]
- 50+ low-latency edge nodes in key metro areas
- 30+ years of networking management experience
