[REDACTED]

[REDACTED]

The diagram illustrates a grid layout with a blue header row and black header columns. The grid is divided into sections by black lines. A large black rectangular area is positioned in the center, with a smaller black rectangular area to its right. The grid is composed of a 10x10 grid of cells, with the first row and the first two columns highlighted in blue and black respectively.

The image shows a 2D grid-based environment with a large black obstacle on the left and a smaller black obstacle on the right. A red path is shown starting from the bottom left, moving right, then up, then right again, ending at the top right. The path is composed of red lines on the grid cells.

1. The connection will terminate in front of NCPS (EINSTEIN) to allow traffic to/from the external connections to be inspected. The NCPS device and the security stack at the portals are the public facing side of the TIC Zone. The incoming traffic from the external network will be inspected by the NCPS device and the security stack before reaching the internal network.
2. The connection will terminate in front of the full suite of TIC sensors/capabilities to allow traffic to/from external connections to be inspected.
3. When connecting over the public networks including the Internet, the VPN connections will be encrypted, compliant to NIST FIPS 140-2.

If required by NSF, CenturyLink will configure telecommunications service priority (TSP) for external connections, including to the Internet, to provide for priority restoration of telecommunication services.
